Directories

PREFACE

IN placing the 1910-1911 Edition of the Chico-Oroville Directory to our patrons we feel confident that it will be found accurate in every particular; especial pains have been taken to bring every department up to the latest possible date. No expense has been spared to give Chico-Oroville and the other towns covered a Directory equal in every respect to those published in the largest cities of the country.

The experience of the past years devoted exclusively to Directory making has been used to excellent advantage in the compilation and publication of the Chico-Oroville Directories and it is confidently believed that this publication will elevate the standard of Directories in California, and it will be found the equal, if not the superior, of any similar publication in America.

Thanking our patrons for the liberal patronage bestowed upon this work, we remain

Respectfully,
R. L. POLK & CO.

CHICO

PREMIER CITY OF THE SACRAMENTO VALLEY.

The second city in size and business importance between San Francisco and Portland, Chico has in the last ten years forged to the front in the estimation of wide-awake business men throughout the State, and today gives promise of a future such as few other cities of the country can claim.

Chico is today on the Sacramento Division of the Southern Pacific railroad; the terminal of the Northern Electric Railroad, operating through all important points of the southern portion of the valley, and the terminal of the Butte County Railroad which reaches into the thousands of acres of resources of the county, and by connection with the Kimshew Logging Railroad at Stirling City, places Chico in touch with the inexhaustible resources of the neighboring counties.

The Diamond Match Company, one of the largest corporations of its kind in the United States, makes its western headquarters in Chico with a plant representing an investment of upwards of $3,000,000, and with an employee roll (including the lumber camps and mills at Stirling City), of over 2,000 men, drawing a monthly payroll of over $150,000.

The activities of the Diamond Match Company facilitate the building activity which has marked the city for the past six months as one of the most progressive and most rapidly growing cities of the State. Coincident with the extension of the Diamond Match Company plants in Chico which are planned for the near future, and which are significant of the confidence of the company officials of the great future in store for this city.

Other industrial interests worthy of mention and significant in showing the importance of the city are the million and a half dollar sugar beet afctory in Hamilton City, twelve miles from Chico, and also the Chico Ice and Cold Storage Plant, the largest of its kind in the State north of Sacramento.

Business interests the state over are coming to see in Chico an opportunity such as is offered in few other cities of the West. Within the past four month new buildings have been erected representing investments of over $125,000, and other buildings are contemplated involving expenditures of over $150,000.

Old buildings are being replaced by those of more modern

construction; in other words, Chico has fallen in as the leader in the march of progress which is sweeping the entire Sacramento Valley. The demand for building space for store and other purposes is far in advance of the ability of the contractors, and indications point to a continuation of Chico's building era for several years to come.

From the point of view of the educator, teh business man, the person seeking healthful conditions and sociable and congenial people, Chico today offers more than any other city of its size in the northern part of the state.

A word as to the future; with the paving of the city streets, the extension of the city limits, and other municipal improvements now advocated by the leading citizens; with the school and church improvements and extension now in progress; with the increasing business and greater stability of the financial institutions of the city; with promises of the city being an important sub-terminal on the new railroad proposed to enter California and form a parallel and rival line to the Southern Pacific; with the coming of a new power company from the north in the next four months; and with the building activity and hundreds of other indications of prosperity now furnished in the daily life of the city, Chico furnishes ample justification today for the prophecy that within the next ten years the city will jump from a municipality of 15,000 population to one of over 25,000, an dto a position om importance second to none of the smaller cities of the State of California.

OROVILLE

"THE GEM OF CALIFORNIA."

Location—Oroville is the county seat of Butte coutny which lies in the great Sacramento Valley. It is 150 miles from San Francisco and 76 miles from Sacramento, the capital of the state. The Feather River flows through the city, leaving the mountain canyon at this point for the broader valley lands.

Schools—Good Grammar schools; High school accredited to the State and Stanford Universities; State Normal in the county.

Churches—Methodist, Congregational, Episcopal, Catholic and Christian Science Society.

Climate—The average rainfall is 25 inches per year assuring abundance of water for farmers, fruit growers and miners. The climate of the valley and foothill region is that which has made California known throughout the world as "The Italy of America." Here are no frozen winters, no cyclones, no hurricanes, no thunder storms. While the eastern states are covered with ice and snow this fair land is clothed with verdure. Ripe fruits are plucked fresh from the trees every day of the year.

The seasons are two: The wet and the dry. During the summer there are at least three months when no rains fall, three months of perfect sunshine. Showers are infrequent in spring and autumn. The wet season is during the winter months. Rain falls at intervals and, as a rule, there are more clear than cloudy days during the rainy period.

The temperature is warm in summer, mild and equable in winter. In summer the air is always dry and the absence of humidity renders the warmest day more comfortable than the average summer temperature of the humid east. Sunstroke and hydrophobia are absolutely unknown here.

The mildness of the winter climate is the best attested by the orange trees and other products of the semi-tropics which grow here to perfection; the roses and geraniums which bloom throughout the year.
